

What are forex rebates?

Forex rebates allows traders to earn extra cash from their trading, and with their preferred forex broker, regardless if a position is closed in profit or loss. Simply put, it's a cashback program offered by a third-party provider, linked to your forex trading account, paying you a cash rebate for each trade you make.

How forex rebate works

Forex rebates are a portion of the transaction cost that is paid back to the client on each trade, resulting in a lower spread and improved win ratio. For example, if your rebate is 1 pip and the spread is 3 pips, then your net spread is only 2 pips.

Unlike some of our competitors your spreads will never increase as a result of using our service!

Example
